Professional Summary

Senior Java Developer with 7+ years of experience in Java, Spring Boot, distributed systems, Spring Security, OAuth2/OIDC, PostgreSQL, RabbitMQ, Docker, and Kubernetes. Passionate about building scalable backend platforms and reusable frameworks.

Experience

Senior Software Engineer, Publicis Sapient, Noida

Jul 2024 – Present

Project: Coreless Banking Modernization (Thought Machine Vault) (Client: NAB)

- Designed a configurable workflow execution framework using a registry-based strategy and stage-driven processing model, enabling new business workflows to be added with minimal code changes.
- Implemented the Transactional Outbox pattern to guarantee reliable event publication and exactly-once processing semantics across distributed services

Project: Aikyam Identity Management (Client: Optum)

- Contributed to COPPA consent implementation in a core module, including parental verification and age-restricted access using Spring Boot REST APIs.
- Added CSRF protection and secure cookie-based token handling to prevent cross-site request forgery attacks.
- Designed and implemented end-to-end propagation of Campaign ID across the OAuth2/OIDC authorization flow, ensuring availability during downstream authentication and consent processing.
- Implemented a JWT-based `login_hint` generation solution using client ID and secret, enabling secure, context-aware authentication and currently used in live authorization flows.

Software Engineer, New Street Technologies Pvt Ltd, Bangalore

Oct 2023 – Jul 2024

- Architected a Credit module in **Java Spring Boot** that fetches CIBIL scores from a third-party API and uses predefined conditions to determine loan eligibility. Added JUnit for testing.
- Developed a Java Spring Boot boilerplate to standardize microservices development integrating **Config Server, Postgres, RabbitMQ, Grafana, and Vault**.
- Optimized RabbitMQ performance by adjusting prefetch count, leading to a 20% increase in message throughput.
- Identified and optimized SQL queries, achieving a 30% performance boost through profiling and monitoring techniques.

Software Engineer, Cedcoss Technology, Lucknow

Apr 2022 – Oct 2023

- Interacted with the teams and developed an in-memory caching application in JavaScript with Time-to-Live (TTL), enhancing performance by 10%
- Implemented data modeling using Spring JPA and unit tests using JUnit in the Social Ads for Buy With Prime application.
- Developed internal libraries in Java for GitHub Audit logs and permissions using AWS Lambda.

Software Engineer, OverIQ (self-employed)

Apr 2017 – Mar 2020

- Built and operated OverIQ, a content and e-commerce platform using Java Spring Boot, serving 150K monthly organic users.
- Improved performance using Memcached, reducing page load latency by 60%, and monetized the platform via AdSense/Ezoic.

Technical Skills

Backend: Java 17/21, Spring Boot 3, Microservices Architecture, OAuth2/OIDC, Spring Security

Data & Persistence: PostgreSQL, MySQL, JPA/Hibernate, Redis (Caching)

Event-driven communication: Kafka, RabbitMQ

Cloud & Infrastructure: AWS, GCP, Docker, Kubernetes, Jenkins (CI/CD)

Testing & Quality: JUnit 5, Mockito, SonarQube, TDD

Education

- Master of Computer Application (MCA)**, Pranveer Singh Institute of Technology
- Bachelor of Computer Application (BCA)**, Indira Gandhi National Open University

2020 – 2022

2013 – 2016
